literature review from the year 2016 in the subject psychology clinical psychology psychopathology prevention grade a language english abstract borderline personality disorder bpd is a complicated psychological disorder that is more common than many believe and involves irregular emotion and behavior and a severe lack in mental awareness reasoning due to the vast and acute diagnostic criteria of bpd patients are viewed as difficult to treat to date there is no medication that has been found to effectively treat bpd for this reason many clinicians turn away patients with bpd because they are not competent to treat bpd and the often poor prognosis not only are clinicians hesitant to take on a patient with bpd the patient is often unwilling to seek and maintain treatment it is thought that those with bpd experienced emotional vulnerability at very young ages which lead to powerful emotional anguish and pain in their adult years this pain and distress is often followed by passionate and uncontrollable anger manipulation and a desire for attention bdp can be classified mainly as psychosocial instability meaning that it takes its form in the inability to maintain relationships although there is a desire to be loved and accepted those with bpd

reject others because of their fear of being rejected in the same way many people who are in relationships friends family or significant others cannot handle a person suffering from such a complicated personality disorder not only are personal relationships hard to maintain jobs are also hard for a person with bpd to maintain this often leads to poverty for those with bpd all of these factors combined can lead to the abuse of drugs and or alcohol and eating disorders also because of the deep emotional pain that is present most of the times bpd patients struggle with self harm eventually leading to suicide it is safe to say that bpd symptoms affect all aspects of life

master s thesis from the year 2019 in the subject biology micro and molecular biology grade 4 arba minch university course medical microbiology language english abstract the aim of this study was to determine the antibacterial activity of crude extracts of four medicinal plants a pirottae g schweinfurthii k begoniifolia and u leptocladon against atcc and mdr clinical isolates of bacteria based on ethnobotanical data four plants were collected from different areas of south omo through several field trips followed by taxonomic identification leaves a pirottae k begoniifolia and u leptocladon and root g schweinfurthii parts of plants specimens were subjected to extraction process using six different organic solvents through maceration and subsequent filtration the resultant crude extracts were screened for primary in vitro antibacterial activity against atcc bacterial strains using agar well diffusion assay the plants that showed the highest activity indices were further screened against mdr bacterial isolates mic was performed on the most active plant extract results of antibacterial activities were analyzed using statistical software spss for

windows version 20 the antibacterial activity significantly varied among the plant species type of solvents used for the extraction and strains of bacteria tested ethyl acetate and ethanol was highly effective for extracting antibacterial principles irrespective of plant species the results of primary screening revealed that two plants k begoniifolia and u leptocladon were highly active against atcc strains the results of the extended screening showed that among the two plants ethyl acetate extract of u leptocladon efficiently inhibited the growth of mdr bacterial isolates the mic values of u leptocladon were varied in inhibiting mdr bacteria tested the overall findings of this study demonstrated that all the four plants have antibacterial activities in varying degrees u leptocladon showed the widest and highest spectrum of antibacterial activities as per agar well diffusion assay and analysis of mic however further ongoing and in depth studies are mandatory in order to prove and understand in vivo efficacy mechanism of action and toxicological profile of these plants in many regions of the world particularly ethiopia the vast majority of traditional medicines are plant based however these plants were neglected and scarcely explored therefore screening of plants used in traditional medicine could provide the chance of discovering antimicrobials that fight against infectious diseases
